

# NEW PRODUCT: Audi A8 Transmission Tailshaft Seal Replacement Kit

May 19, 2016

**Everything you need to repair your Audi A8 automatic transmission tailshaft leak in one convenient kit!**

**Subject: Automatic Transmission Tailshaft Seal Replacement Kit**

**Application: 1997-2003 Audi A8 4.2L V8**

**Part Number: F2A6004-B**

**Release Date: 5/19/2016**

Blauparts is pleased to offer our Audi A8 transmission tailshaft (aka output flange) seal replacement kit!

In our own service facility, we've repaired many different transmission leaks. The most common being an Audi tailshaft flange seal leak. Often due to the high temperatures created by the catalytic converters, which are located directly by the Audi tailshaft flange seal area. Temperature fluctuations can also attribute to the Audi tailshaft flange seal becoming hard and brittle. Over time (typically around 70,000-100,000 miles), the tailshaft seal commonly begins to leak due to it's inability to properly seal. Unchecked, the Torsen differential (which is directly responsible for the Quattro system) can eventually be depleted of critical differential lubrication. Thus, an unfixed tailshaft flange leak can impact the reliability and longevity of your Quattro system and lead to very costly transmission problems or failures.

Our seal replacement kit contains everything you need to perform an effective and affordable replacement of your Audi transmission tailshaft (aka output) flange seal. We even include how to tailshaft seal replacement instructions. Also this kit is relevant to the seal where the Quattro driveshaft meets the rear of the transmission.

We wish to thank all our customers for their continued support! Feel free to contact us with any questions on our transmission fluid and filter change kits.
