

# BLAU<sup>®</sup> SS (SUPER STOP)

Performance Street Brake Pads  
with Multilayer Technology that makes all the difference.

**NRS**

## Blau SS Brake Pads feature the following benefits:

- Total Quality, Manufactured in Europe (ECE-R-90 Approved)

- 01** Metal shim backing plate - reduces the vibrations and noise, prevents squealing
- 02** High temp powder coating - making the view through your alloy wheels pleasant for a long time
- 03** O.E. specification backing plate - prevents brake pad warping during high temperature operation
- 04** Patented NRS Mechanical Retention System - assures a perfect bonding between the friction material and the backing plate
- 05** Proprietary adhesive - ensures NRS plate and the friction material is secured under all conditions
- 06** Proprietary under layer material - absorbs heat, and transfers it away from the friction material resulting in less brake fade during aggressive driving conditions
- 07** Chamfering - eliminates judder and improves the proper bedding of the brake pad into the brake rotor face
- 08** Twaron<sup>®</sup> based composite premix - provides the foundation for friction material. Improves the bonding of the friction material to the backing plate
- 09** Proprietary composite friction material - produced with "positive warm molding technology" providing excellent bite and brake pedal control with no fade and low dust
- 10** Scorching - thermal treatment of the friction surface at 600° C creates an instant "break in" period when installed. It also produces a brake pad that resists "brake fade" in extreme conditions

100% Non - Asbestos and Heavy Metal Free
